For my final project, I created a 3D scene of my dining room table. I ultimately decided not to implement the plate of cheese and meat or the goblets because it would've required lots of shapes, textures, and shading, which would've added a lot more complex code. It also would've made the loading time for the project build longer. Still, I added a bowl with several fruits and a wine bottle to add enough complexity to make the scene fun and interesting, and because dining tables are meant to have food and drinks on them.

For the graphics, I used OpenGL with GLEW and GLFW components. This graphics system allows for input, for which I implemented keyboard controls. These controls are designed to allow users to navigate the scene and view it from many angles. These controls include the WASD keys to move forward, backward, and from side to side, as well as mouse movement to rotate the camera. Additionally, I used many custom functions in my program, including methods like LoadSceneTexture(for the various textures), DefineObjectMaterials(to define what the scene's textures are), and SetupSceneLights(for the lighting).
