Step 1: Change the name of the OpenGL window.

```
2  #include <cstdlib>           // EXIT_FAILURE
3
4  #include <GL/glew.h>         // GLEW library
5  #include "GLFW/glfw3.h"     // GLFW library
6
7  // GLM Math Header inclusions
8  #include <glm/glm.hpp>
9  #include <glm/gtx/transform.hpp>
10 #include <glm/gtc/type_ptr.hpp>
11
12 #include "SceneManager.h"
13 #include "ViewManager.h"
14 #include "ShapeMeshes.h"
15 #include "ShaderManager.h"
16
17 // Namespace for declaring global variables
18 namespace
19 {
20     // Macro for window title
21     const char* const WINDOW_TITLE = "Natalie English";
22 }
```

Step 2: Run the OpenGLSample. If the code runs successfully, a 3D scene containing a glass of wine, some cheese, and bread should be displayed in the OpenGL window. While the code is running, check the title of the window to make sure it shows your name. Take a screenshot that includes the window's updated title.

The process of setting up and testing OpenGL through my Visual Studio app was, overall, quite easy, as the source code presented no issues (although it loaded slowly; in about 22 seconds).
